

One Series EQ2 Programmable Equalizer

Product # SA270

Product Description:

The **EQ2 Programmable Equalizer** is the most powerful and advanced equalizer pedal on the planet. This exceptional piece of gear builds off the legacy of its predecessor, the Source Audio Programmable EQ, a tremendously popular pedal that landed on the boards of numerous pro guitarists, including six-string icons David Gilmour and John Mayer. The updated EQ2 is a combination graphic and parametric equalizer with 10 fully adjustable frequency bands, stereo ins & outs, MIDI in and thru jacks, 4 or 8 onboard presets, 128 MIDI accessible presets, an additional +12dB volume boost, a built in noise gate, limiter, and tuner, plus the ability to simultaneously run two discrete EQ presets (one for each stereo output).

The EQ2 is also fully integrated with Source Audio's Neuro System. This innovative system includes the Neuro Hub and the very powerful Neuro Desktop Editor and Mobile App (now with two way communication via the pedal's mini USB port). This innovative software provides deep editing capabilities with a sleek and intuitive user interface. The Neuro Editors are available as free downloads for Mac/Windows computers and iOS/Android mobile devices.

"Source Audio created a completely new product category when we released the Programmable EQ pedal back in 2011," said Source Audio President Roger Smith. "It gradually became one of our most successful products. We are confident that the EQ2, with its ten adjustable frequency bands, stereo I/O, and both graphic and parametric equalization capabilities, will be an incredibly useful sound-sculpting tool for musicians of all genres."
